2GIG

Encrypted Flood and Temperature Sensor

FT1E-345

SKU: 162860   UPC: 817082013473

Reduce the risk of takeovers with eSeries Encrypted technology.

The 2GIG-FT1e-345 is a fully supervised, tamper protected one-way 345 MHz sensor. It will monitor the ambient temperature and will detect a wet/dry flood condition. The sensor reports wet/dry conditions and temperature to the panel.

Flood Conditions
Once the sensor probe detects the presence of water for three (3) minutes, the integral transmitter will send a wet alarm transmission to the security/control panel. The probe will also send a restore (dry) report when the presence of liquid is no longer detected by the flood probe for three (3) minutes. For flood reporting, the sensor requires the installation of the supplied external flood probe. The sensor is capable of detecting clean or dirty fresh water, salt water, or tap water.
