### Water Sensor 7 Pro

ZWA019

SKU: 177773    UPC: 81066702533

Water Sensor 7 Pro's accuracy, reliability, and compatibility begin at its very foundation. With its leak processor sized at only 70x30mm (2.8x1.9in), it has been built atop of Aeotec's exclusive Gen7 technology enabling it to be wireless installed almost anywhere in a room and to operate for 3 years before its single, 3.6 volt battery needs changing.

What comes up. If it were only a leak detector, we wouldn't call it Water Sensor 7 Pro. Monitoring more than just the presence of liquid, Water Sensor 7 Pro earns its name through its ability to also monitor the absence of water. When used to monitor tanks or pits, Water Sensor 7 Pro can alert you when water levels get too low and can also trigger automation routines.

#### Features

- **Leaks & bursts**

Water Sensor 7 Pro's stainless-steel detection-tip can detect minuscule amounts of water – as little as 0.5mm / 0.02" on a surface - making it your first line of defence against damaged and faulty plumbing.

- **Floods**

Whether a small amount or large, Water Sensor 7 Pro also is perfect at monitoring for the accumulations and floods that you can anticipate, such as sump basins and in wet areas.

- **Overflows**

Accidents happen but that doesn't make the damage caused by forgotten taps any less expensive. Water Sensor 7 Pro can alert you to the water you've forgotten to turn off before it's too late.

- **Heating management**

A sensor with sensors. Water Sensor 7 Pro monitors a room's temperature between -10°C and 65°C (14°F and 149°F) and with a variance of only  $\pm 1^{\circ}\text{C}$  /  $\pm 1.8^{\circ}\text{F}$ . Such accurate environment data can be used to monitor and manage a room's connected heating or cooling systems.
