

QS DMX Controller

QSE-CI-DMX

SKU: 34854    UPC: 27557624565

The QSE-CI-DMX operates either in a standalone QS system, a Quantum system, an Athena system, or a HomeWorks system. It performs different functions depending on the system in which it is operating.

**QS Standalone System** The QSE-CI-DMX control interface allows zones on a GRAFIK Eye QS to control DMX512-controlled devices. Any zone on the GRAFIK Eye QS can be mapped to either a single DMX512 channel or to three separate DMX512 channels, for RGB /CMY color-control applications.

**Quantum, Athena, or HomeWorks Systems** The DMX channels (maximum of 32) are mapped to Quantum, Athena, or HomeWorks zones, and can be programmed as 1-channel lighting, 1-channel integration, or 3-channel RGB /CMY. If the QSE-CI-DMX is part of a Quantum or HomeWorks system, GRAFIK Eye QS zones cannot be programmed to control DMX channels.
