## 2-Speed Analog Turntable

DP-29F

SKU: 73750    UPC: 81757504836

Now's the time to put your vinyl records back into your listening rotation. The DP-29F includes a built-in RIAA phono equalizer to hook it up to your system through a standard analog connection. The DP-29F has been precision manufactured with rigid diecast aluminum to produce uniform inertial mass for perfectly stable turntable rotation, an essential component of high fidelity sound during playback. The turntable employs an automated system that starts playing the record with the single touch of a button and finishes play at the end of the record by returning the tone arm to its original position and stopping turntable rotation. This system ensures that you do not inadvertently scratch your records when you play them. There is also a manual lifter mechanism that allows you to place the needle on the record wherever you want, so you can skip to a song in the middle of a side. The DP-29F includes a built-in phono equalizer to connect the unit to an integrated amp that does not have its own equalizer. This turntable is powered by a DC servo motor and belt drive system and operated at the 33 1/3 or 45 rpm speed. It comes with an MM cartridge so that you can begin to enjoy your analog record collection as soon as you connect the DP-29F to your home hi-fi system. Two-year warranty on New and one-year warranty on Refurbished model.
