

Just Add
Power

Stereo Encoder/Decoder (Transceiver)

ST1

SKU: 170377

Use the Ultra 3G ST1 Sound Transceiver to add a stereo audio source to a Just Add Power system, or to extract stereo audio from an existing system source. This audio-only device works seamlessly with all other Just Add Power products in a 3G Ultra system. Thanks to the unmatched scalability, this device is also compatible with the 2G Omega systems.

Combine Just Add Power Transmitters, Receivers and the Sound Transceiver in the same installation. You can watch the big game while listening to radio commentary, give a presentation by mixing PC video with microphone audio, or even add audio return channel from a SmartTV.

Features

- Stereo audio; 192kHz and 24-bit supported
- Transceiver; operates as a Transmitter OR Receiver
 - As an Transmitter, input stereo audio to play on any Receiver
 - As a Receiver, output stereo audio from any Transmitter to a speaker or amp
- Variable audio
- Power Over Ethernet (POE)
- RS232 or IR* control of endpoints
