

# Artison

Mezzanine Surround Satellites Pair

MEZZ-8-SURR

SKU: 74113    UPC: 827531002422

Mezzanine surrounds are designed to acoustically blend with Artison front channel solutions using similar high-end drivers. The tweeters are wired out of phase and the baffles are angled making them hard to localize. Unique hybrid acoustic design is a Monopole/Dipole mix allowing for sound "steering" needed for movies - without changing the natural ambiance of a musical recording.

Mezzanine surrounds are designed to be installed in-wall or in-ceiling. For installation flexibility the standard round grille can be replaced with a square grille (purchased separately). The grilles are held in place by neodymium magnets and are flat and paintable so they will easily blend into any environment.

#### Features

- State-of -the-art architectural loudspeaker
- Hybrid acoustic design
- Large diffuse ambient sound field
- Designed to be installed either in-wall or in-ceiling
- Optional square grille accessory is available
