

## Image Sensor Motion Detector

IS-300-LP

SKU: 186646

The Image Sensor (model ADC-IS-300-LP) delivers smarter security with instant visual verification of alarms and increased engagement through on-demand views. Our latest model has been redesigned to deliver higher resolution images, improved night vision, and a wider field of view. It is ETL certified, battery operated, and communicates with the customer's security control panel. Swap it for a standard motion sensor in typical installations for increased customer value and higher account RMR.

Integrated with Alarm.com Interactive Services, images are easily accessible to customers. All uploaded images are viewable on the Alarm.com Customer Website or through the mobile apps. Users can even receive images in text or email alerts whenever an image is uploaded— whether in the event of an alarm, or on-demand for important events. The Image Sensor is compatible with most Alarm.com supported panels. Some panels require additional hardware.
