

JASCO

Under Eave Lights, RGBWW, 36 Light Add On - Black

84426

SKU: 189361

The JascoPro RGBWW Under Eave Lights are a discreet, UV resistant, IP65 weatherproofed under-eave lighting solution designed for permanent, year-round installation. RGBWWIC LEDs provide true-color illumination up to 43 lumens per pixel at 6500K with a CRI (color rendering index) of 90 for rich, vibrant white accent lighting. Featuring fully dimmable solid or endless per-light color combinations, users can customize their moods to suit any environment—perfect for patios, eaves, pergolas, balconies, and more!

Users can control their lighting simply through the JascoPro app or any of their favorite mobile and voice assistant controllers for powerful, simplified control of exterior lighting from anywhere in the world! Cuttable, paintable and linkable strands allow users and installers to blend the lighting system into any environment, for a subtle but powerful integrated lighting system, even in retrofit installs.

Patent-pending 12.5° angled clips allow for a convenient mounting option with an eye-catching wall-wash effect that creates a beautiful cascade of vibrant lighting along exterior walls for both fascia and eave mounting (angled brackets sold separately). Strands and extensions up to 99' or up to 108 additional lights can be cut and connected to suit a variety of install sizes, and the included hex screw brackets and wire clips make installation and wire management a breeze.

Meets NEC and ETL requirements for low-voltage outdoor lighting. Includes a 5-year manufacturer's warranty. Designed for permanent, year-round outdoor installation (lighting rated IP65, cord and power supply rated to IP67 standard). Includes 36 white LEDs for extending a JascoPro Under Eave lighting system an additional 33 feet. Not compatible with other LED lighting systems.

Features

- 36 tunable white light RGBWWIC color LED (2000K – 6500K) add-on for JascoPro Under Eave lighting systems
- Provides 33' add-on lighting
- 11" spacing between lights
