

Copper Cop HVAC Cooper/Metal Theft Prevention

CC3008

SKU: 65560 UPC: 93863121647

Copper Cop is an efficient, dependable and reliable security protection solution designed to combat theft of commercial air conditioning (HVAC) units. Copper Cop can be installed and activated in minutes by a security professional and, unlike other HVAC alarm products, does not require an HVAC or Electrical Contractor's License.

Thousands of commercial HVAC units are destroyed each year by thieves seeking to gain quick cash by stealing copper condenser lines and selling them at scrap yards. The cost of business disruption can be high, including replacement of the HVAC system, and inability to use the facility while the HVAC service is being restored. Additionally, repeated thefts increase a company's insurance premiums, making copper theft one of the most vexing challenges businesses face today.

Features

- Reliable, simple non-intrusive solution to guard against HVAC unit copper or metal theft
- Does not require Electrician's or HVAC Contractor's license
- Does not trigger a false alarm even if fluctuations in refrigerant pressure or electrical power outages occur (Connected alarm system must have backup battery power to operate properly during a power outage)
- Ready to accept hard-wired alarm system connection or wireless alarm transmitter
- Optional secondary 30-foot harness can be added to cover larger commercial HVAC units (60ft length total); Linear CC3008XT
- Bright yellow cable harness acts as a visual deterrent to would-be thieves
