Combination Smoke / Heat / CO Detector

PROSIXCMBOV

SKU: 187369

The PROSIXCMBOV is a two-way, professionally monitored, wireless, combination smoke/heat and carbon monoxide (CO) detector. More advanced than a standard battery-operated smoke detector, it provides true multi-threat detection and can react faster to real danger.

Reduce your risk of home fires with the PROSIXCMBOV Two-Way Wireless Smoke/Heat/CO Detector. With the “One-Go-All-Go” feature, if one sensor detects smoke, heat or carbon monoxide, and begins to sound, all sensors in the system will sound.

The PROSiXCOMBO detector also gives audible instructions that can support multiple languages. A prominent, 360° viewable LED shows visual alerts. Multi-color LEDs intuitively indicate alarm and CO conditions. Sophisticated and trusted algorithms interpret and respond to conditions - cutting down on false alarms.
